

PTFE Zone Tape

[Click Here for a Price Quote](#)

PTFE-Glass fabric zone tapes are primarily used in applications where it is not desirable for adhesive to come in contact with a heating element or it is necessary to cover an expensive component of a packaging machine such as silicone sponge or foam.

The absence of adhesive in the center zone allows for faster heat transfer through the tape making it an excellent choice for specific types of impulse sealing applications.

Zone tapes should also be considered in applications where PTFE-Glass fabric needs to be mechanically fastened to a surface

Zone tapes are primarily made from fabric thicknesses of .003", .005", .006" & .010". All zone tapes are custom made to your specifications. Acrylic and silicone adhesive strips are both available although acrylic is more

Typical applications include:

- Heat sealer bar cover
- Hotwire covers
- Manufacturing of poly bags
- Drop sealers

Andrew Roberts Inc. is a leading converter and fabricator of high performance coated fabrics tapes & belts. Our converting capabilities include:

Die Cutting - Slitting - Sheeting - Heat Sealing - Sewing
